Object Code: 83/179

Quantity: 1.00

Cultural Association:

Maker:

Production Place:

Description:

Dissecting forceps hold tissues & steadies it for dissection or suturing etc. The handles have a spring-like action. The outer surface has a few ridges to give a better grip. The blades are serrated transversely on the inner aspect so that a better grip on tissues can be obtained, c. 1950.

Provenance:

Cape Medical Museum
