Object Code: 84/792

Quantity: 1.00

Cultural Association:

Maker:

Production Place:

Description:

The Davidson pneumothorax apparatus consists of a five way valve where the pressure in the chest cavity was measured in order to induce an accurate measurement of air into this space to collapse the lung. Connected to the five way valve are inlet and outlet tubing, a manometer, a pair of reservoirs, and an operating needle. Material: Wood, glass, metal, rubber. Colour: Brown, clear, silver, dark grey, c. 1940.

Provenance:

Cape Medical Museum
